

Portfolio Website Documentation

Oriba Sahar — Full-Stack Developer Portfolio

A responsive personal portfolio site built with semantic HTML5, CSS3, and vanilla JavaScript, styled around a full-stack "layered architecture" visual concept.

Version 1.0 · Prepared July 30, 2026

1. Project Overview

This project is a single-page personal portfolio website for Oriba Sahar, a final-year IT student and full-stack developer. It was built as part of a Full Stack fundamentals challenge covering HTML, CSS, and Git/GitHub. The design centers on a visual metaphor of a layered technology stack — Database, Backend, Frontend, and an emerging AI layer — rendered as a stacked cross-section diagram in the hero section.

Attribute	Detail
Author	Oriba Sahar
Type	Single-page static portfolio (no build step, no dependencies)
Core files	index.html · style.css · script.js · README.md
Fonts	JetBrains Mono (headings/monospace accents), IBM Plex Sans (body text) — via Google Fonts
Hosting	Designed for GitHub Pages deployment

2. Technology Stack

2.1 Used to build this site

- Semantic HTML5
- CSS3 — Flexbox, Grid, media queries, and CSS custom properties (variables)
- Vanilla JavaScript — mobile navigation toggle, scroll-reveal animations, copy-to-clipboard
- Google Fonts — JetBrains Mono & IBM Plex Sans

2.2 Showcased on the site (author's skill set)

Layer	Technologies
Frontend	React.js, JavaScript ES6+, Redux/Toolkit, Zustand, Tailwind CSS, Bootstrap, HTML5/CSS3
Backend	Node.js, Express.js, REST API design, JWT auth, role-based access control (RBAC)
Data	MongoDB, Mongoose, MySQL, PostgreSQL, Prisma, Drizzle, NeonDB

AI & Emerging (learning)	TensorFlow.js, LangChain, agentic web apps
Tools & Practices	Git, GitHub, JIRA, Trello, VS Code, Agile/Scrum

3. Project Structure

```
portfolio/  
■■■ index.html    # Page markup and content  
■■■ style.css     # All styling, variables, layout, responsive rules  
■■■ script.js     # Nav toggle, scroll-reveal, copy-to-clipboard  
■■■ README.md    # Project description and setup instructions
```

4. Page Sections

Section	Anchor	Contents
Navigation	—	Fixed header with logo, animated status dot, and links to all sections; collapses to a toggled mobile menu
Hero	#home	Name/eyebrow location line, headline, intro paragraph, two CTA buttons, and the animated layer
About	#about	Background narrative plus a quick-facts side panel (location, education, focus, languages, status)
Stack	#stack	Skills grouped into four panels — Frontend, Backend, Data, AI & Emerging — plus a Tools & Practices panel
Projects	#projects	Four project cards: Basecampy, EventHub, Expense Tracker, and Amazon/Netflix UI clones — each with a description and links
Experience	#experience	Vertical timeline of two roles: Operations Team Member (MLSA YE) and Student Ambassador (CSCS)
Education & Certifications	#education	Two-column layout: degree/school/score entries and a checklist of three certifications
Contact (footer)	#contact	Email with copy-to-clipboard button, phone, LinkedIn, and GitHub links

5. Design System

5.1 Color palette (CSS custom properties)

Variable	Value	Role
--ink	#12181F	Page background
--panel / --panel-2	#1B232D / #212B36	Card and panel backgrounds
--line	#2A343F	Borders and grid lines
--text	#E8ECEF	Primary text
--muted	#8B98A5	Secondary/muted text
--amber / --amber-dim	#F2A93B / #7A5B27	Accent (frontend, primary CTA, AI-layer highlight)

--teal / --teal-dim	#4FD1C5 / #2E5450	Accent (backend/data, links, status)
---------------------	-------------------	--------------------------------------

5.2 Typography

- **JetBrains Mono** — headings, logo, nav links, tags, and code-like labels, reinforcing the developer aesthetic
- **IBM Plex Sans** — body copy and longer descriptive text for readability

5.3 Layout techniques

- CSS Grid for the hero two-column layout, stack/skills grid, project cards, and the two-column education/certs layout
- Flexbox for navigation, chip rows, CTA button rows, and the timeline
- A fixed full-page grid background (`.grid-bg`) with a radial mask for subtle depth
- CSS custom properties centralize all colors, fonts, and radius values for easy theming

5.4 Motion & interaction

- Scroll-reveal: elements tagged `.reveal` fade and slide in via an `IntersectionObserver` when they enter the viewport
- A traveling signal dot animates up the stack visual on an infinite loop
- A blinking status dot in the logo uses a simple opacity keyframe animation
- `prefers-reduced-motion` media query disables/shortens animations for users who request reduced motion

6. Responsive Design

Breakpoint	Behavior
900px	Hero collapses from a two-column grid to a single column (visual stacks below the text)
820px	About section grid collapses to a single column
760px	Nav links move into a collapsible mobile menu (hamburger-style "MENU" toggle); skills grid and two-column education/certs collapse to a single column
700px	Project cards collapse from a two-column (tab + content) layout to a single column

7. JavaScript Functionality (script.js)

Feature	How it works
Mobile nav toggle	Clicking the <code>#navToggle</code> button toggles an <code>.open</code> class on <code>#navLinks</code> ; clicking any nav link closes the menu
Scroll-reveal animation	An <code>IntersectionObserver</code> watches all <code>.reveal</code> elements (threshold 0.15) and adds an <code>.in</code> class — triggering the animation

Copy-to-clipboard	Clicking the #copyEmail button writes the author's email to the clipboard via navigator.clipboard.writeText, t
-------------------	--

8. Running Locally & Deployment

8.1 Run locally

No build tools or package installation are required — this is a static site.

```
git clone https://github.com/your-username/your-repo.git
# then open index.html directly in a browser
```

8.2 Deploy to GitHub Pages

- Push the repository to GitHub
- Go to **Settings** → **Pages**
- Under "Build and deployment", set **Source** to the main branch, root folder
- Save — the site becomes live at `https://your-username.github.io/your-repo/`
